Re: Johns Manville's AP Foil Faced Polyisocyanurate Continuous Insulation

Dear Valued Customer,

Johns Manville continually strives to improve our products and options for our customers. Johns Manville's AP Foil-Faced polyisocyanurate sheathing boards have been engineered for a number of applications such as wall sheathing, insulation for cathedral ceilings, and CMU (concrete-masonry-wall unit) wall installations; and are manufactured to meet the specification requirements for ASTM C1289 (*Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board*), Type 1 products. Johns Manville is writing this letter to respond to an inquiry related to the asbestos content of the AP Foil-Faced sheathing for which I can provide the following. Johns Manville's AP Foil has not been and currently is not manufactured with asbestos.

JM has always endeavored to give customers the information necessary to make the best choice for their situation. Please feel free to contact your local Johns Manville Sales Representative for availability and additional information on these and all our Johns Manville insulation products or visit the Johns Manville website: <http://www.jm.com>.

Sincerely,

A handwritten signature in black ink, appearing to read 'Michaela Roy'.
