MATERIALS MATTER

At Johns Manville, everyone in our company is committed to a core principle: Materials Matter. Our focus on performance inspires our research, design and manufacturing teams to consistently deliver quality products that promote more comfortable, healthier and energy-efficient environments.

ONE-STOP INSULATION SHOP

JM is the only company to manufacture and offer a complete hybrid solution that includes both spray foam and certified Formaldehyde-free™ fiber glass insulation. This means you can increase energy efficiency, deliver thermal comfort and provide acoustical performance with a single insulation source, no matter what the situation.

JM Climate Pro®

Thermal & Sound Control Blow-in Fiber Glass

Blow-in, loose-fill fiber glass insulation is designed for open attics and hard-to-reach locations like corners, edges and around framing. It is safe and easy to install and does not shrink or settle. Climate Pro insulation is for professionals using large truck-mounted high-volume production blowing wool machines and for the Blow-In-Blanket System® (BIBS®).

JM Spider®

Thermal & Sound Control Blow-in Fiber Glass

Custom Insulation System

Loose-fill fiber glass insulation with a spray adhesive added at the time of installation. The system is designed to help save time while reliably filling all gaps and voids in walls around electrical fixtures, pipes and other obstructions.

Installed Without Adhesive

JM Spider insulation can also be installed without adhesive in Drill-and-Fill and BIBS applications. The specially designed fibers are very effective at delivering the desired performance for these types of installs.

Unfaced

Thermal & Sound Control Batts and Rolls

Light-density unfaced batts for installation within wall cavities, floors and ceilings. Available for metal or wood framing. May be used with a separate vapor retarder when moisture control is required. High-performance cathedral ceiling batts also available. Available in R-values ranging from R-11 to R-38.

MINERAL WOOL INSULATION

MinWool® Sound Attenuation Fire Batts

MinWool Sound Attenuation Fire Batt insulation is designed to deliver noise control and fire protection in steel-stud wall cavities of interior partitions or above suspended ceiling systems. MinWool Sound Attenuation Fire Batt insulation is made of inorganic fibers derived from basalt, a volcanic rock, with a thermosetting resin binder.

MinWool® Safing

MinWool Safing insulation is designed to be installed between the spandrel panel and floor slab in commercial curtainwall systems to provide a fire-rated seal. It also prevents the passage of flame and smoke in openings that penetrate fire-rated assemblies. MinWool Safing insulation is made of inorganic fibers derived from basalt, a volcanic rock, with a thermosetting resin binder.

MinWool® Curtainwall

MinWool Curtainwall insulation is designed to provide superior fire resistance and thermal properties in glass, metal and masonry curtainwall spandrel systems. The board can be placed between or over framing members, and held in place with mechanical fasteners. MinWool Curtainwall insulation is made of inorganic fibers derived from basalt, a volcanic rock, with a thermosetting resin binder.

AP™ Foil-Faced

Polyisocyanurate Foam Sheathing

Rigid foam sheathing insulation for use in commercial and residential construction where continuous insulation and/or high thermal efficiency is required. Reduces thermal bridging at framing members and is noncorrosive and lightweight. Behind an approved thermal barrier, approved for use in above and below grade exterior walls, above and below grade interior walls, attics and cathedral ceilings, and crawl spaces.

When properly installed, functions as a water-resistive barrier, vapor barrier, and air barrier, eliminating the need for additional components. Reflective foil facer on one side, nonreflective foil facer on the other.

JM Corbond III®

Spray Polyurethane Foam

Closed-cell JM Corbond III spray foam is a premium insulation that offers superior thermal performance, advanced air isolation and excellent moisture control. It resists mold and mildew, which improves the indoor environment. Our spray foam insulation allows a 3-inch lift in a single pass while providing an R-21. JM Corbond III boasts an industry-leading R-value of 7.0/per inch and can be applied on substrates as low as 20 degrees Fahrenheit. JM Corbond III insulation and its unique Lavender® color have become the symbol of uncompromising quality and performance.

JM Corbond MCS™ SPF

Spray Polyurethane Foam

Closed-cell JM Corbond MCS spray foam acts as a climate barrier, keeping the indoors from the outdoors. The closed-cell polyurethane foam provides superior thermal performance in addition to important air and moisture isolation. JM Corbond MCS can provide an R-13 when installed at a thickness of 2 inches and R-38 at 6 inches. It offers a maximum thickness of up to 2 inches per pass and can be applied in temperatures as low as 45 degrees Fahrenheit.

JM Open-cell SPF

Spray Polyurethane Foam

JM ocSPF is a low-density, nonstructural open-cell spray polyurethane foam insulation that allows contractors to quickly insulate and air seal in a single step. It helps restrict moisture transmission, is mold and mildew resistant and minimizes sound transmission. JM ocSPF has a versatile range of R-values: R-3.8 when installed at a thickness of 1 inch, R-13 at 3.5 inches and R-19 at 5.5 inches. When used at a thickness of 3.5 inches, JM ocSPF is considered an effective air barrier, which improves the indoor environment and makes a building more comfortable. It can be applied when ambient air and surface temperatures are between 40 and 120 degrees Fahrenheit.
